Please **AMEND** the last paragraph on page 2 as follows:

At best, such systems utilize information about customers' purchases to provide rewards for past purchases. Merchants hope that customer anticipation of such rewards may generate future sales. However, there is no guarantee that merchants ~~merchant~~ will enjoy additional business from the customers. In addition, customers may not always remember which types of purchases will eventually yield rewards. Accordingly, the rewards may not provide a strong incentive to make purchases.

Please **AMEND** the first full paragraph on page 14 in the section entitled "CUSTOMER SELECTION" as follows:

The POS terminal receives one or more product identifiers, each specifying an offered upsell, from the central controller 12. The product identifier may comprise descriptive text such as the name of the upsell, a price of the upsell, the name of the merchant offering the upsell, or a combination thereof. Thus, the POS terminal may display the received text on a display region of the corresponding CAT. In such an embodiment, conventional POS terminals which receive and display transmitted text would be able to present upsell offers to customers ~~customer~~. Alternatively, each product identifier may comprise a unique code that indicates text to display. In such an embodiment, the POS terminal would employ each unique code as an indicator to a textual description stored either in the POS terminal or in a storage area in communication with the POS terminal. For example, the unique code could be used as an index to a look-up table containing stored descriptive text. The POS terminal would access and display the text corresponding to the unique code on the display region of the corresponding CAT.
